

Skills for the Future of the Water Sector

Young Water Dragons

Young Water Dragons aims to find and celebrate future creative thinkers, leaders and entrepreneurs of the water sector.

With the utility sector facing a skills challenge of attracting people, particularly within the water sector, where at the utility level, water companies will need to have replaced their entire workforce by 2024! It is essential to look at encouraging young people to become excited by the water sector as a career; investing in future skills, future talent is critical to ensure that the water sector remains fit for purpose.

The goal of Young Water Dragons is to encourage as many schools as possible to think about water, to develop projects and to bring forward new ideas which challenge our current thinking. Working with the National Science Council, Engineering UK, this initiative has been granted one of the special awards categories for the Big Bang National Competition final.

To meet this achievement Future Water Association through Young Water Dragons is bringing together companies and organisations from across the water sector to invest in its future. Your support will allow the Association to:

- Increase the visibility and grow the Young Water Dragons award, making it part of the National STEM Awards programme linked to the Big Bang Fair;
- Support communications to schools to encourage a focus on 'water projects'
- Bring new skills and people into the water sector
- Enable Future Water Association to develop an engagement plan with schools to inspire the potential entrants
- Work with schools to put water at the top of the careers agenda!

As a Sponsor you will be:

- Investing in the future of the water sector
- Encouraging new talent and people to 'think water'
- Supporting tomorrow's water leaders and entrepreneurs
- Linking your company with an initiative targeted at future skills, critical in today's market
